Make route based on tickets

Description:
John has bought a new house and found a diary of the previous house owner, describing a single trip. There were tickets inside with source and destination points, but without dates. Help John find the original route of the trip.

Task:
Write a function that accepts an array of tickets, where ticket has format [source: string, destination: string] and returns comma separated countries in order of visiting.

```javascript
function getRoute(tickets){
 return 'USA,BRA,UAE,JPN,PHL'; // implement logic here
}

const result = getRoute([['JPN', 'PHL'], ['BRA', 'UAE'], ['USA', 'BRA'], ['UAE',
'JPN']]);
console.log(result);
```

Example:
Tickets: [["JPN", "PHL"], ["BRA", "UAE"], ["USA", "BRA"], ["UAE", "JPN"]]
Result: "USA, BRA, UAE, JPN, PHL"
